

Education & Learning

What is AI ?

AI stands for Artificial Intelligence. It can create images, words and videos on your smart device.

AI is not a person. It is a computer program that gathers lots of information to generate an answer.

It can respond to your questions and words like you are having a conversation with someone.

AI can be useful but it can also give wrong information and can be biased.

Education & Learning

What is AI ?

Examples of AI are ChatGPT, Google Gemini and Grok.

There are many other AI programs that can create fake pictures and videos.

For example, you can ask AI to put a dog next to you in a picture.

AI can make it confusing to know if a picture is real or fake online.

AI Safety

If you are unsure about the information AI gives you, ask someone you trust.

Do not give any personal information to AI like your address or bank details.

AI can not help you like a real person can.

Scammers now use AI to trick people, this can be with fake videos or using fake voices.

AI Safety

Scammers also use fake ads on social media using AI.

Lots of fake videos, pictures and news can be found on social media.

If you are unsure of something, always talk to someone you trust first.
